

Minteq Pyrogenics Group

Firex™ coatings have provided fire and thermal protection for personnel and property for over 30 years.

Complying with stringent military and defense fire standards, Firex™ products have a proven track record and are optimized to provide the highest level of performance in rapid temperature rise fires, retaining strength, with excellent adhesion even in the harshest of environments such as cellulosic and hydrocarbon fires.

Firex™ fire protection coatings are ready for your application now!

CASE STUDY

Today's modern world of 24 hr banking revolves around ready access to fast cash and deposits through convenient automated teller machines (ATMs). In a major metropolitan city, thieves were using gas torches to cut ATMs out of their frame structure carrying them off or simply cutting them open, stealing the contents.

The Challenge:

How to instill convenient, yet affordable, anti-theft protection to thwart the ATM thieves from

taking the money or destroying the contents?

The Results:

The ATM manufacturer lined the interior of the machine under the front face with prefabricated Firex™ RX-2373 panels. Since this intumescent coating absorbs and rejects thermal energy in a controlled and predictable manner, it is ideal for hydrocarbon based fire insults. The Firex™ panels absorbed the heat of the torch, rendering it useless for cutting away and stealing the ATM machine and the money.

This thievery was stopped cold when Firex™ came to the rescue!
